SUMMARY:

Tesla is a top-of-the-range inflatable boat with a robust aluminium floor, capable of comfortably seating several people. Designed with durability in mind and built to withstand the elements without compromising on safety, Tesla is ideal for transporting passengers, crew, or dive teams for a wide range of activities on water – including marine film services, survey work, and diving services.

Tesla can also be flat packed and transported by road, facilitating her use on remote rivers, lakes, and waterways throughout the UK or internationally. Tesla is therefore a brilliant choice whenever in need of a high-quality, versatile vessel for filming jobs or safety boat work.
